

Section 1. Establishment of Board. There is established, effective October 20, 1993, a board of three members to be appointed by the President to investigate this dispute. No member shall be pecuniarily or otherwise interested in any organization of railroad employees or any carrier. The board shall perform its functions subject to the availability of funds.

Sec. 2. Report. The Board shall report its findings to the President with respect to the dispute within 30 days after the date of its creation.

Sec. 3. Maintaining Conditions. As provided by section 9A(c) of the Act, from the date of the creation of the board and for 120 days thereafter, no change, except by agreement of the parties, shall be made by the carrier or the employees in the conditions out of which the dispute arose.

Sec. 4. Expiration. The board shall terminate upon the submission of the report provided for in Section 2 of this order.

William J. Clinton

The White House,
October 20, 1993.

11:22 a.m., October 21, 1993]

NOTE: The Executive order was published in the *Federal Register* on October 22.

Letter to Senate Leaders on the Conflict in Bosnia

October 20, 1993

Dear Mr. Leader:

The violent conflict in the former Yugoslavia continues to be a source of deep concern. As you know, my Administration is committed to help stop the bloodshed and implement a fair and enforceable peace agreement, if the parties to the conflict can reach one. I have stated that such enforcement potentially could include American military personnel as part of a NATO operation. I have also specified a number of conditions that would need to be met before our troops would participate in such an operation.

I also have made clear that it would be helpful to have a strong expression of support from the United States Congress prior to the participation of U.S. forces in implementation of a Bosnian peace accord. For that reason, I would welcome and encourage congressional authorization of any military involvement in Bosnia.

The conflict in Bosnia ultimately is a matter for the parties to resolve, but the nations of Europe and the United States have significant interests at stake. For that reason, I am committed to keep our nation engaged in the search for a fair and workable resolution to this tragic conflict.

I want to express my lasting gratitude for the leadership you have shown in recent days as we have worked through difficult issues affecting our national security. With your help we have built a broad coalition that should provide the basis for proceeding constructively in the months ahead. Once again you have earned our respect and appreciation.

Sincerely,

Bill Clinton

NOTE: Identical letters were sent to George Mitchell, majority leader of the Senate, and Bob Dole, minority leader of the Senate.

Appointment of Members of the Board of Governors of the American Red Cross

October 20, 1993

The President announced today that he intends to appoint seven administration officials to be Government members of the Board of Governors of the American Red Cross. The seven are:

Secretary of Defense Les Aspin;
Export-Import Bank Chairman Kenneth Brody;
Secretary of State Warren Christopher;
Secretary of Education Richard Riley;
Secretary of Health and Human Services Donna Shalala;
Federal Emergency Management Agency Director James Lee Witt; and
General John M. Shalikashvili, Chairman of the Joint Chiefs of Staff.

"I have long admired and sought to support the ongoing work of the American Red Cross to bring aid to those in need both around the world and here in our own communities," said the President. "As I recently saw firsthand during the Midwest flooding this summer, their workers and volunteers are true lifesavers. I am appointing this senior group of officials to serve on their board because I want to be sure that my administration does everything that we can to support the Red Cross' important work."

**Proclamation 6616—National
Biomedical Research Day, 1993**
October 20, 1993

*By the President of the United States
of America*

A Proclamation

The Congress has designated October 21, 1993, as "National Biomedical Research Day." On this day, we celebrate the central role played by biomedical research in improving human health and longevity, and we acknowledge the promise this wide-ranging endeavor holds for securing the future physical and mental well-being of people around the world. Biomedical research not only yields the requisite information that scientists and physicians need to prevent and treat diseases but also reveals the fundamental nature of life in humans, other animals, and plants.

There is an intriguing quality to biomedical research: A discovery does not always predict its future uses. As a consequence, it is essential that the Nation continue to champion broad-based studies of both the normal and the disease processes. These studies will yield a fundamental understanding of biological systems and will provide us with the foundation of knowledge needed to ensure successful responses to current and future health problems.

An event that took place 40 years ago illustrates how vital such fundamental knowledge is. In 1953, Nobel laureates Drs. James D. Watson and Francis H.C. Crick described the structure of DNA, the genetic material of all living things. Today, as a direct outcome of their basic research, gene therapy has

been devised for children with severe combined immune deficiency; accurate diagnostic tests are available for many life-threatening diseases and conditions; and the genetic mechanisms underlying disorders like cystic fibrosis and Huntington's disease have been identified.

The discovery of the structure of DNA also set the stage for the development of recombinant DNA technology, out of which has blossomed the biotechnology industry. In just the past 10 years, some 1,300 biotechnology companies have been formed. Through biotechnology, chemists and biologists are able to design and produce novel medicines and vaccines for clinical use. Scientists have learned how to commandeer the cellular machinery of living organisms, so that these organisms produce needed proteins and other biological molecules. Researchers have also genetically "engineered" crop plants to make them harder and resistant to pests. The success of the biotechnology industry has also enhanced the economic competitiveness of the United States in the world marketplace. There is no doubt that the future fruits of biotechnology, both medical and economic, will be even greater.

The continuing preeminence of the United States in biomedical research reflects the contributions of many groups of dedicated professionals at work in Federal agencies such as the National Institutes of Health and the Centers for Disease Control and Prevention and in government-supported laboratories at universities, hospitals, and private research facilities. Teachers at all levels—from those who encourage our kindergartners to those who train biomedical specialists—are also helping to ensure the future success of biomedical research, an enterprise that cannot go forward without both strong practitioners and a supportive public.

Unraveling the mysteries of living organisms remains a daunting task. But, through biomedical research, the ceaseless whooping coughs of children have been silenced; smallpox no longer exacts a human toll anywhere on the Earth; and vaccines, treatments, and cures are at hand for many diseases. As the struggles continue against AIDS, cancer, heart and lung diseases, arthritis, diabetes,
